> *AI won't replace designers, but designers who use AI will replace those who don't.*

Similar to how calculators were once thought to replace mathematicians, many fear that AI will replace designers. However, this is a misconception. Just as calculators didn't replace mathematicians, AI won't replace designers either.

Instead, AI will offer you — designers, new tools and capabilities to increase their efficiency and creativity. In this post, we'll explore why AI won't replace designers, but rather enhance their work.

This blog is an attempt to the personal mission of mine at gethired.design to build super power designers who can become recession proof. So lets talk about how to embrace ChatGPT to become irreplaceable in your team.

1. Generate checklist for UI Design using ChatGPT

Creating a UI design checklist is a helpful tool for designers to ensure that all the necessary design elements are considered. With ChatGPT, designers can easily generate a comprehensive checklist that covers essential elements such as user flow, accessibility, color scheme, typography, consistency, and usability.

Copy this Prompt 👇🏼

> Create a checklist for UI elements for a perfect [Screen / feature] in a table

S Create a checklist for UI elements for a perfect Login Screen in a table

Sure, here's a checklist for UI elements that can help create a perfect login screen:

UI Element	Description
Logo	A recognizable brand logo that adds credibility and enhances the visual appeal of the login screen.
Username or Email field	A text field that allows users to enter their username or email address.
Password field	A text field that allows users to enter their password.
Forgot Password link	A link that redirects users to a page where they can reset their password.
Remember Me Checkbox	A checkbox that allows users to stay logged in even after they close the application.
Sign in button	A button that allows users to submit their credentials and login.
Sign up button	A button that allows new users to register for the application.
Social media login options	Options to allow users to login via their social media accounts.
Error message display	Clear and concise error messages to inform users of any login failures or errors.

Create a UI Checklist using ChatGPT

2. Create userflow for UX design

Picture this: You've just launched your latest product, and while it looks great on paper, you're not getting the engagement you were hoping for. You scratch your head, wondering why users aren't sticking around. This is where creating a user flow comes in. It's the key to unlocking the mystery of how users interact with your

product, helping you identify pain points and ultimately, improve the overall user experience.

By mapping out a user's journey, you'll gain insight into their goals, actions, and potential roadblocks. And here's how you can use Chat GPT:

Copy this Prompt 👇🏻

```
Can you create user flow for a [app type]?
```

> **S** Can you create user flow for a women only social media app?
>
> 🟢 Sure, I'd be happy to help you create a user flow for a women-only social media app!
> Here's an example of a possible user flow:
>
> 1. User registration:
>   • User downloads the app and creates an account.
>   • User enters personal information, such as name, age, and email address.
>   • User creates a unique username and password.
>   • User agrees to the app's terms and conditions.
> 2. Profile setup:
>   • User sets up their profile, including a profile picture and bio.
>   • User has the option to link to their other social media accounts.
> 3. Explore content:
>   • User browses through various categories such as fashion, beauty, lifestyle, health, etc.
>   • User can like, comment, or share content they find interesting.
>   • User can follow other users or specific categories to see more of their content.
> 4. Create content:
>   • User creates content, such as photos, videos, or written posts.
>   • User can add tags to their content to make it easier to find.

Create User Flows for Apps using ChatGPT

3. Generate Design System using ChatGPT

Design systems ensure consistency, efficiency, and quality in design work, but creating one can be complex and time-consuming. ChatGPT can help by generating a system tailored to your needs, covering typography, color palettes, layout grids, and iconography.

Copy this Prompt 👇🏼

```
Write a design system documentation for a [UI Element]? Represent in a table wi
```

Sure, here is an example of design system documentation for a Button, represented in a table with various states and design tokens:

State	Design Token Name	Design Token Value	Description
Default	Background Color	$button-bg-color	The background color of the button in its default state.
	Text Color	$button-text-color	The text color of the button in its default state.
	Font Family	$button-font-family	The font family of the button in its default state.
	Font Size	$button-font-size	The font size of the button in its default state.
	Border Radius	$button-border-radius	The border radius of the button in its default state.
Hover	Background Color	$button-hover-bg	The background color of the button when it is being hovered over.
	Text Color	$button-hover-text	The text color of the button when it is being hovered over.
Clicked	Background Color	$button-clicked-bg	The background color of the button when it is being clicked on.

Generate Design System using ChatGPT

4. Generate Color Palette using ChatGPT

By leveraging the power of AI, ChatGPT develops a range of colors that are tailored to your brand's personality and style, saving you time and energy.

Copy this Prompt 👇🏼

Can you suggest primary, secondary and tertiary colors for an [App / Website]?

Sure, here are some suggestions for primary, secondary, and tertiary colors for a women-only social media app:

Color	Hex Code	Use
Primary	#FF69B4	Main color for branding and accent color for important elements.
		This bright pink color is feminine and bold.
Secondary	#FFE4E1	Subtle background color for various sections and cards.
		This light pink color is calming and soft.
Tertiary	#A9A9A9	Neutral color for text and borders.
		This light grey color is easy on the eyes and unobtrusive.

5. Prepare User Interview questions

Prepare for user interviews like a pro with ChatGPT. Get insights on the best questions to ask and how to structure your interviews, all in one place. Elevate your user research game today.

Copy this Prompt 👇🏼

Generate a user interview questions for an [Idea/App].

Sure, here are some sample user interview questions for a women-only social media app:

1. How did you first hear about our women-only social media app?
2. What motivated you to sign up for our app? What do you hope to gain from using it?
3. How do you typically use our app? What features do you use the most? The least?
4. How do you feel about the privacy and safety features of our app?
5. Have you connected with other users through our app? If so, how has this experience been for you?
6. Do you find the content on our app relevant and interesting? Why or why not?
7. How would you describe the overall user experience of our app? Is there anything that could be improved?
8. What additional features or functionality would you like to see added to our app in the future?
9. How does our app compare to other social media apps you've used in the past?
10. Would you recommend our app to your friends and family? Why or why not?

6. Build User Persona using ChatGPT

Create effective marketing campaigns and understand your audience betterm by building user personas with ChatGPT. Gain valuable insights on demographics, behaviors, and motivations.

Copy this Prompt 👇🏼

```
Can you create a user persona for an [App/Website]? Represent in a table.
```

Name	Age	Gender	Occupation	Education	Marital Status	Location
Sarah Martinez	35	Female	Marketing Specialist	Bachelor's Degree in Marketing	Married	New York City, USA

Personality Traits	Needs	Goals
Ambitious	Expand professional network	Find new career opportunities
Driven	Connect with other women in her field	Learn from other women in her field
Collaborative	Find female mentors	Share her own experiences and insights with other women
Passionate about Diversity and Inclusion	Join communities and events focused on diversity and inclusion	Promote diversity and inclusion in her own professional network

Pain Points
Limited opportunities to connect with other women in her field
Difficulty finding female mentors
Lack of diversity in her current network

Create a User Persona using ChatGPT

7. Use ChatGPT to write website copies (UX Writing)

Are you tired of generic website copy that fails to engage your audience? I was too, until I tried ChatGPT. Now, I'm able to design better because I no longer use Lorem Ipsums. With ChatGPT's AI-powered capabilities, you can generate personalized and high-quality content that perfectly fits your brand and speaks to your target audience. Give this prompt a try and elevate your website's user experience with compelling copy.

Copy this Prompt 👇🏼

```
You're a UX writer now. Generate 10 versions of 404 error message for a [App/We
```

Sure, here are 10 versions of a 404 error message for a women-only professional social media app:

1. Oops! Looks like you've wandered off course. Let's get you back on track.
2. Sorry, we couldn't find what you're looking for. Please try again.
3. Uh oh, it seems like something's gone wrong. We're working to fix the issue.
4. This page has gone missing! Please check your URL and try again.
5. We're sorry, but the page you're looking for is not available at the moment.
6. We're lost too! Let's head back to the homepage together.
7. Something's not right here. Can we help you find what you're looking for?
8. The page you're looking for may have been moved or deleted. Let's find it together.
9. Looks like you've hit a dead end. Let's redirect you to a more promising path.
10. Oops! We can't seem to find what you're looking for. Please try a different search term or contact support for assistance.

Use ChatGPT to write website copies and do ux writing

8. Speak with annoying clients

We can now use ChatGPT to generate a message that is professional and tactful, while also expressing their need for payment in a clear and concise manner. It was worked wonders for me to handle some annoying clients.

Copy this Prompt 👇🏻

```
Negotiate with a client who hasn't paid me the final amount even after deliveri
```

Sure, here's an example of a message you could send to a client who hasn't paid the final amount for a project:

Dear [Client],

I hope this message finds you well. I wanted to follow up regarding the final payment for the [project name] we completed. While we delivered the project as per the agreed terms and deadlines, I have yet to receive the final payment of [amount due].

As you know, we put in a great deal of effort and resources into this project and I believe it's only fair that we receive payment for the work we have completed. I understand that there may be extenuating circumstances and I would appreciate any information you can provide regarding the delay in payment.

I kindly request that you process the final payment as soon as possible. If there are any issues or concerns regarding the payment, please do not hesitate to reach out to me so we can discuss and find a solution that works for both of us.

I look forward to hearing back from you soon.

Best regards,
[Your Name]

Write emails and messages using ChatGPT

Summing up

In summary, the concern that AI will replace designers is unfounded. Just like calculators did not replace mathematicians, AI won't replace designers. Instead, AI offers designers new tools and capabilities to increase their efficiency and creativity.

I created this as a prompt cheatsheet blog to help you accelerate your design workflow. It is a part of our mission at gethired.design to empower designers to become recession-proof and enhance their work.

Cheers! You're Breathtaking!

🚀 Also hey! I just launched gethired.design 👇🏼

It is a website offering game-changing hacks, tools, and resources, from optimizing your LinkedIn profile to a Figma resume template, that have helped people land
